Accessories That Enhance Your Customers' Driving Experience

Genuine Toyota Wheel and Tire Theft Protection

Help customers protect their investment by suggesting Genuine Toyota Wheel Locks and Spare Tire Locks. Beyond the peace-of-mind in knowing wheels and tires are secure, these indispensable accessories save Toyota owners the time and expense of replacing wheels and tires—and also help protect against the additional vehicle damage that can occur during theft. Not to mention protection from being stranded away from home or having to pay out-of-pocket insurance deductibles. That's a lot of protection for a very affordable price!

A must for dependable prevention of wheel and tire theft, Genuine Toyota Wheel Locks and Spare Tire Locks allow every Toyota owner to enjoy proven protection against thieves, crafted to the same exacting standards as every Toyota vehicle.

ACCESSORIES

SERIOUS THEFT PROTECTION

FOR EVERY TOYOTA

When it comes to serious theft protection for wheels and tires, it doesn't get any better than Genuine Toyota Wheel Locks and Spare Tire Locks. Engineered to Toyota's exacting performance requirements and rigorously tested under the most severe conditions, Genuine Toyota Wheel Locks and Spare Tire Locks can be counted on for levels of fit accuracy and quality typically not found in the aftermarket. And, Toyota owners can be assured that Genuine Toyota Accessories are designed with the utmost in durability and reliability.

Model-Specific Design Protection

All Genuine Toyota Wheel Locks are specifically designed to fit Toyota wheels, ensuring a factory installed appearance and superior functionality that's tailored to each individual Toyota model. For trucks and sport utilities, Genuine Toyota Spare Tire Locks take that protection a step further,

helping to also protect rear-mounted and crank down spare tires against theft.

Wheel locks are available in kits of four or five (the 5th lock is for an exterior-mounted spare) with a special wheel lock key tool that fits all locks in a set. For crank-down spares, the lock permanently attaches to the crank-down mechanism and the key conveniently attaches to the crank-down tool provided in the vehicle's tool kit.

The wheel lock system features one locking lug nut per wheel. Each locking lug nut matches the dimensions and weight—and functions the same—as a stock lug nut. Plus Genuine Toyota Wheel Locks are weight-matched to the stock lug nut, eliminating the need to rebalance the wheels following installation.

Ultra-Precise, Computer-Generated Key Patterns Increase Security

The primary difference between the locking lug nuts and stock lug nuts is the special key tool provided for installation, a process made simple by the key's steel collar guide. The collar guide holds the key in alignment over the locking lug nut, making wheel lock installation (and removal) as easy as turning the key until the patterns engage. For increased security, the ultra-precise, computer-generated groove key patterns are extra narrow to resist intrusion of lock removal tools, while allowing for an infinite number of unique lock and key patterns exclusive to Toyota.

User-Friendly Installation

The wheel lock system installs in just a few minutes, with simple user-friendly steps. Just remove one regular lug nut from each wheel, then replace each with a locking lug nut, using the key tool. The last step is to complete and mail in the ID Registration Card included with the system to register the key code for fast, efficient replacement of wheel locks and key tools.

STRICT MANUFACTURING STANDARDS ENSURE STRUCTURAL INTEGRITY

All Genuine Toyota Wheel Locks and Spare Tire Locks are made in the United States with restricted chemistry steel for enduring structural integrity. Each is thoroughly hardened and tempered for a depth of hardness that ensures unsurpassed safety levels (in contrast to typical aftermarket locks that use case hardening, which is only a surface treatment).

Superior Fit and Finish

Even distribution of the clamp load and uniform seating of the lock to the wheel is assured through the highest, most precise standards for concentricity of the bearing surface to the pitch diameter, while core integrity and precise machining provide the highest proof load standards in the industry. Finally, Toyota wheel locks receive three layers of nickel plating, the first for corrosion protection, the second for luster and a third layer that interacts with a layer of microporous chrome to disperse corrosive action, ensuring the wheel locks retain their shine for years to come.

Key Advantages At a Glance:

Genuine Toyota Wheel Locks/Spare Tire Locks

Feature	Function	Benefit	Toyota Wheel Locks & Spare Tire Locks	Typical Aftermarket Wheel Locks
Made to Toyota's Engineering Requirements	Ensures the product meets all Toyota performance standards	Guarantees fit, quality, durability and performance of the wheel locks	YES	NO
Toyota-specific Design	Unique shank style lug with flat washer matched factory lug nuts	Guarantees the wheel locks will fit properly	YES	Most are cone seat, those with shank style have different diameter resulting in poor fit
Precision-weight Matched	All wheel locks are weight-matched to the stock lug nut weight	Rebalancing unnecessary after wheel lock installation	YES	Can cause an out of balance condition
User-friendly DIY Installation	Special key tool and collar guide make installation and removal simple and intuitive	Toyota owners can easily self-install in minutes	YES	Many aftermarket wheel locks are not user friendly
Thoroughly Hardened & Tempered Steel Construction	Ensures structural integrity	Achieves a depth of hardness necessary for unsurpassed safety & security levels	YES	Typically case-hardened (surface treatment)
Triple Nickel Chrome Plating	Every Toyota wheel lock receives three layers of nickel plating and a layer of microporous chrome	Superior corrosion protection; wheel locks maintain shine	YES	NO
Exclusive Key Patterns	Toyota-specific key patterns allow only a single unique key to interface with the wheel locks	Ensures security of wheels/spare tire; resists intrusion of lock-removal tools	YES	NO
Customer Service Program/Wheel Lock Registration	Provides replacement keys and locks to customers within 24 hours	Ensures satisfied customers	YES	NO
Dealer Master Key Set	Removes all Genuine Toyota Wheel Locks	Allows dealer to service vehicles even if customers lock is missing	YES	NO
